

Healthcare Kiosks Buyer's Guide

Find out about the Important Features to Consider When Selecting the Right Kiosk for Your Healthcare Organization

Healthcare Kiosks Buyers Guide: What Features Do I Need?

If you are looking to invest in a Healthcare Kiosk implementation, this infographic will help guide your decision by highlighting some key features that you may want to consider.

ADA Compliance

Most healthcare facilities are subject to ADA (Americans with Disabilities Act) compliance and failure to comply can result in thousands of dollars in fines for each occurrence.

Key statistics to consider:

- According to the most recent census, **19% of Americans have a disability**
- Approximately **1.5% use a wheelchair**

Two basic ADA compliance considerations for your healthcare kiosks are

- Maximum height of the interactive touchpoint is 48 inches
- Minimum height for accessibility is 15 inches

Adjustable kiosks like **Olea's Verona Kiosk** (pictured to the right), controlled by a push-button, are a new technology that allow the entire unit to adjust to the user's position and are the best-in-class feature for ADA compliance

EMV Compliance

If your healthcare kiosks accept payments, then **choose a solution that offers EMV**

- EMV (Europay, Mastercard, Visa) is commonly referred to as Chip and Pin and is a debit or credit card with a smart chip that is accepted by an EMV card reader.
- As of October 2015, merchants in the United States accepting debit and credit cards who have not upgraded to EMV are liable for fraudulent transactions at their places of business.
- In 2015 merchants incurred **\$580 million** in fraudulent purchases.

Software Compatibility

Olea's healthcare kiosks are highly customizable and can be outfitted to operate most major healthcare software solutions.

- According to a study by the US IT Health Dashboard, just three software companies control over 60% of the healthcare IT market (Epic, Cerner, and Meditech)
- By utilizing a healthcare kiosk provider that can integrate with your existing software, you are able to save countless man-hours as the data captured by your kiosk will be in digital format thereby minimizing the data entry tasks for your administrative staff.
