Olea Healthcare Kiosks Increase Efficiency

Multi use kiosks have significantly increased efficiency and patient satisfaction in emergency departments, waiting rooms and ambulatory settings. Patients can easily check in and out, perform payment transactions, access their health records, and get help with wayfinding through the often complicated layouts of medical facilities. Informational kiosks can also have multi language capabilities which allows a hospital to provide better service to a diverse customer base. Similar to retail establishments, the healthcare organizations that are adopting this new technology are finding improvement in user experience, and also creating a differentiating factor over the competition that is not utilizing these technologies.

OLEA has modified two of our standard kiosks, the Boston and the Metropolis, specifically for the healthcare environment. These kiosks incorporate various patient identification devices such as electronic signature pads, PIN pads, and ID scanners. We've also had several requests to integrate biometric devices such as fingerprint scanners, palm scanners, and iris scanners.

Our new Milan pedestal style kiosk is also quickly gaining a name for itself as the kiosk of choice when deploying

The Milan
Perfect for wayfinding
in a healthcare setting

large format touch screens for healthcare wayfinding applications. With its versatile design that can accommodate an array of large format touch screens from various manufacturers, the Milan kiosk is the premier choice for today's sophisticated wayfinding applications.

TapSnap Partners with Olea to Launch the Ultimate Phototainment Kiosk

The recently launched, TapSnap Phototainment kiosk was designed and manufactured by OLEA Kiosks. TapSnap is the reinvention of the traditional photo booth, for the digital age. The fun and interactivity of photo booths have sparked a demand across the U.S. TapSnap is the ideal way to elevate any event like weddings, parties, and corporate functions. TapSnap is owned by DVDNow, a company that manages operations in over 16 countries and has the largest independently operated DVD rental kiosk network in the world. To continue their success and expand into new markets, DVDNow partnered with OLEA Kiosks to create the TapSnap Phototainment system.

The kiosk is the ultimate portable photo booth. It features a large 42" multi-touch LCD monitor that responds to up to 4 simultaneous touches, as well as a high end Canon DSLR camera, PC and printer. The kiosk is designed like a large 42" tablet set on top of a sawhorse base, making it extremely fast to setup with no tools.

TapSnap merges the latest advances in touchscreen technology with the popularity of social media and photo sharing. After a quick setup, users can take

photos and draw on them, share them on Facebook, email them, and/or print them as keepsakes. The machine can also be set to record video for well wishes.

TapSnap is actively signing up Franchises and can be found at: www.tapsnap.net
