Olea Joins the GSA Schedule

Olea Kiosks is pleased to announce that the Cyber Security kiosk solution is now listed on the GSA IT Schedule 70. This Malware Scrubbing kiosk solution is a turnkey package complete with top tier components and multiple antivirus detection software that scans portable media devices such as USB drives, SmartMedia, and CD or DVD discs.

Olea has a long standing relationship with many federal, state and local government agencies utilizing kiosk solutions. Department of Homeland Security, VA Medical Centers, Army, Navy, Department of Defense and US Customs are all existing clients of Olea. Purchasing through GSA ensures that buyers are receiving the best proven product and price without the mountains of paperwork associated with purchasing.

"Joining the GSA Schedule allows Olea to reach all departments and agencies within the government space and offer our Cyber Security solution at the best possible price," states CEO, Frank Olea. "This is the beginning of a host of turnkey solutions Olea will be offering on the GSA Schedule and we are excited about the new business opportunities."

Contact our Government Specialist or search GSA Advantage for Olea to order your solutions.

Kiosks Debut at DMV

In partnership with IBM Global Technology Services and Tightline Systems Inc., Olea Kiosks has recently delivered self-service terminals to Arizona drivers. Now in DMV offices across Arizona, residents are able to bypass lines and manage their transactions using kiosk terminals. Users can get important information, pay bills, and renew registration, among other key tasks. The self-service terminals also help reduce otherwise long wait times for drivers that require personal attention.

VA Healthcare Check-In

Now available at the Department of Veterans Affairs / Malcolm Randall VA Medical Center in Gainesville, Florida, are the Olea Metropolis kiosk solutions. In partnership with REPTrax, a leader in healthcare vendor credentialing and hospital policy enforcement, these kiosks provide a web based solution designed to help healthcare institutions track and manage their vendors' credentials, track vendor activity/behavior and track compliance to vendor policies. Vendors use the kiosks to check-in when entering the facility; the system will identify the vendor and print a visitor badge which specifies what level of access they have to the facility. The kiosks are a fully integrated touch screen solution utilizing the Dymo Label Writer 450 Turbo label printer to print the vendor badges.
